

#### Day 4

- Post harvest management (Fire, stand protection, temp crossings, track and dump drainage)
- Treatment after harvest (timing, methodology, stocking rates, species mix)
- Fire Management for fuel reduction, regeneration establishment and habitat and stand protection
- Forest management planning as part of Property Management Planning,

Private Forestry Service Queensland (PFSQ)  
is an incorporated not-for-profit  
Forest Industry Development Association.

PFSQ  
is supported by the  
Queensland Government  
Department of Agriculture and Fisheries.

#### *Field Day Time Investment*

The Workshop Series is delivered  
in 2 x 2 day sessions.

Ideally 6-8 hours per day  
allowing for landholder travel,  
one to two weeks between each  
session depending upon  
availability of attendees.

Further Information:

Contact PFSQ

Phone: 07 54836535

Fax: 07 54838996

Email: [pfsq@bigpond.com](mailto:pfsq@bigpond.com)

*DAY 1 will be at 'Boomerang' at the end of  
Doughboy Road. See last page for directions*

## 4 Day Native Forest Management Systems Workshop Series

**Thursday & Friday October 2017**  
1st session, 12 - 13 October  
2nd session 19 - 20 October

Workshops delivered by PFSQ,  
sponsored by the  
Qld Dept of Agriculture and Fisheries  
through the

*Private Native Forest Extension Program*

# 4 Day Native Forest Management Systems

**Private Forestry Service Queensland** delivers a 4 day interactive workshop aimed at improving landholders' knowledge of silviculture forestry Systems, building an ability to develop and introduce sustainable forestry management practices.

The series covers environmental systems relating to native forest management, ecological values, legislative constraints, species identification, stocking rates, harvesting to ensure ongoing production, maintaining biodiversity and a range of management techniques and strategies.

## Day 1

- Intro to Native Forest Legislation (PMAV's VMA, IPA, Trigger maps, etc)
- Recognising forest species and products in the field, specifications and hierarchy of values, stand assessment, stocking rates, crown position, forestry evaluation
- Reading tree crowns, understanding crown placement, tree form, vigour and growth rates as well as indicators of stem faults, termites and other problems.
- Native forest assessment methods, stocking rates and forest health and the resultant evaluation of the condition of the stand and implications for forest management directions.

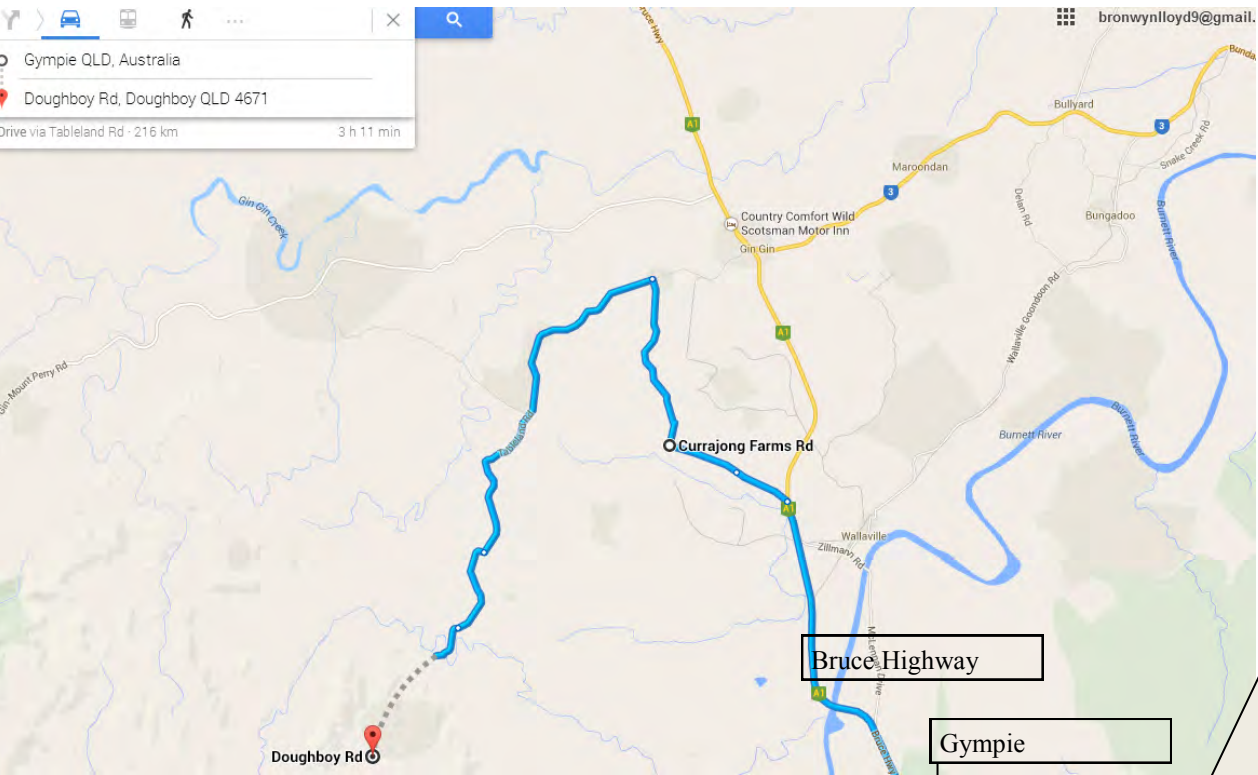

## Day 2

- When is a stand ready for harvest or treatment? (Standing volume, viability, species, product range (optimal diameter)
- Condition of the stand and implications for forest management directions. (Review)
- Landscape and its implications for forest Management including biodiversity, habitat and ecological values. Location of buffer and filter zones, exclusion areas, habitat trees, tracks, etc.
- Timber Stand Improvement (forest thinning) processes including tree marking for retention, stocking rates, treatment methods and costs.
- Enhancing native grasses and legume values, forest management and GLM

## Day 3

- Marketing (potential buyers, their constraints/processes, products)
- Harvest access (Property access – power lines, bridges, low branches, sharp corners, grade, wet weather access, log-dump/loading/turn around area size and location, snig tracks, crossings)
- Harvest planning and management including planning for regeneration (seed, lignotuber or coppice), mapping, fire management, exclusion zones and maintenance of ecological values.
- Stand protection, penalty clauses, timber sales, values, product range
- Contractors, contracts, standing sales, log dump sale, mill gate sale
- Contractor management (accreditation, insurance, reputation)
- Writing a base harvest plan

Travel north  
Pass Old Wallaville Rd on the right  
Continue along the Bruce Highway  
Turn left into Currajong Farms Road  
Currajong Farms Road turns into Settlement Road - [There appears to be some unsealed road here, but it was the preferred route]  
Follow Settlement Road until it intersects with Tableland Road  
Turn left into Tableland Road - follow along  
Tableland Road eventually becomes Horsecamp Road  
Follow Horsecamp Road until it becomes Doughboy Road  
'Boomerang' property is at the end of Doughboy Road

If you prefer to go through to Gin Gin, you turn left into Walker St  
Turn Right into Tirroan Road  
Tirroan Road then becomes Tableland Road  
  
Follow as per other directions
